

LEDGERFLOW AI • INVOICE SYNC
UNIFIED DIGITAL ECOSYSTEM

LEDGERFLOW AI BY CLINEXGEN

Supplier bills in, Tally vouchers out.

AI reads the bill, with no templates to build. A person approves every voucher before it posts, and Tally's own reply confirms it.

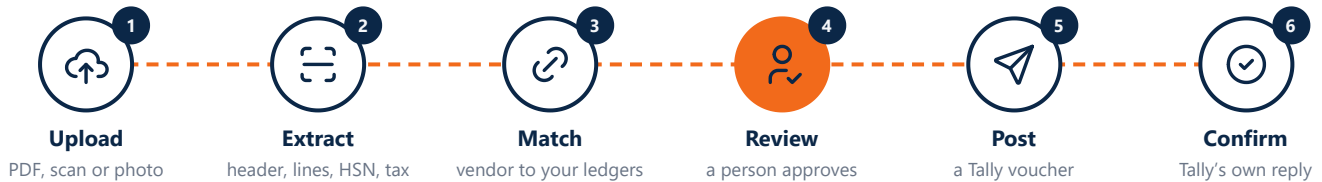

WHAT CHANGES • MEASURED ON ONE BOOK OF YOUR OWN BILLS

MEASURE	MEASURE	MEASURE	MEASURE
			
Minutes per bill	Bills still keyed by hand	Vouchers Tally refused	Days to close purchases
Review replaces typing; the bill beside a filled-in grid.	New supplier layouts are read with no template to build.	A refusal stays in the queue with Tally's reason, never marked synced.	Tax ID, duplicates and round-off checked before posting, not at close.

Before and after, on your own data. Your baseline week first, then a 30-day pilot on one book. No result is quoted before your pilot has measured it.

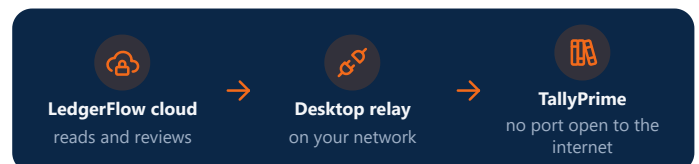

HOW IT WORKS • SIX STEPS FROM BILL TO TALLY VOUCHER

WHO IT'S FOR, AND THE EDITIONS

-  **For the people who own the purchase books**
CFOs and finance heads, chief accountants and purchase desks, CA practices and outsourced accounting firms, on TallyPrime.
-  **Three editions, one product**
Standard for a single book or a first run; Professional for working practices and mid-size finance teams; Enterprise for multi-entity groups and accounting firms. Your proposal sets the edition and volume.

TRUST • WHERE A BILL GOES

Said up front: bill images are read through Google's Gemini API. Four roles are checked on every request and every edit is logged. You stay the data fiduciary under the DPDP Act, 2023. No certification is claimed.

NEXT STEP

Let's run your own bills through it

			
Walkthrough	Posted live	Pilot on one book	Roll out
This week, with whoever runs Tally	Same session: five of your bills, to a test Tally company	30 days, beside your process, no commitment	After the day-30 report and your proposal

Bring to the walkthrough five supplier bills, the messier the better: a scan, a phone photograph, a handwritten one.
